

Data Files and Do Files to replicate results in:

Bell, B., Costa, R., and Machin, S. “Why Does Education Reduce Crime?”, *Journal of Political Economy*

(1) Data Files

(a) arrest_data_all_states.dta

This is an annual dataset which contains log of arrest rates by crime type for males in each age group 15-24 inclusive for US counties in all states where data is available (excluding Alaska, District of Colombia and Hawaii). Compulsory schooling law reforms of Table 1 are identified and labelled as discontinuities. Additional data on covariates includes log of population, log of police force sworn and shares of female, black, non-white/non-black population.

(b) arrest_data_discontinuity_states.dta

This is an annual dataset which contains log of arrest rates by crime type for males in each age group 15-24 inclusive for US counties in states experiencing compulsory schooling reform. The sample is restricted to a 10-year cohort bandwidth around each reform-state pair. Compulsory schooling law reforms of Table 1 are identified and labelled as discontinuities. Additional data on covariates includes log of population, log of police force sworn and shares of female, black, non-white/non-black population.

(c) cps_attendance_all_states.dta

This is an annual dataset which contains high school attendance status for males in each age group 16-18 in all states where data is available (excluding Alaska, District of Columbia, and Hawaii). Compulsory schooling law reforms of Table 1 are identified and labelled as discontinuities. Additional data on covariates includes Black and Hispanic indicators and school year.

(d) cps_attendance_discontinuity_states.dta

This is an annual dataset which contains high school attendance status for males in each age group 16-18 in states experiencing compulsory schooling reform. The sample is restricted to a 10-year cohort bandwidth around each reform-state pair. Compulsory schooling law reforms of Table 1 are identified and labelled as discontinuities. Additional data on covariates includes Black and Hispanic indicators. month of interview and school year.

(e) acs_all_states.dta

This is an annual dataset which contains information on schooling, work status and weekly wages for US born males in each age group 19-60 inclusive in all states where data is available (excluding Alaska, District of Columbia, and Hawaii). Compulsory schooling law reforms of Table 1 are identified and labelled as discontinuities. Additional data on covariates includes Black and Hispanic indicators and state of birth.

(f) acs_discontinuity_states.dta

This is an annual dataset which contains information on schooling, work status and weekly wages for US born males in each age group 19-60 inclusive in states experiencing compulsory schooling reform. The sample is restricted to a 10-year cohort bandwidth around each reform-state pair. Compulsory schooling law reforms of Table 1 are identified and labelled as discontinuities. Additional data on covariates includes Black and Hispanic indicators and state of birth.

(g) arrest_data_dynamic_incap.dta

This is a cohort level dataset which contains log of arrest rates by crime type for males in two age groups (15-18 and 19-24) for US counties in states experiencing compulsory schooling reform. The sample is restricted to a 5-year cohort bandwidth around each reform-state pair. Compulsory schooling law reforms of Table 1 are identified and labelled as discontinuities. Additional data on covariates includes log of population, log of police force sworn and shares of female, black, non-white/non-black population.

(h) Figure_1_data.dta

This is dataset contains male arrest rates by age, calculated for years 2000-2010 from Uniform Crime Report data use to compose Figure 1.

(i) dropout_age_1980_2010.dta

This is dataset contains the binding dropout age for the US states for the years 1980 and 2010.

(j) maps_c.dta

US states shape files used to compose Figure 2.

(k) maps_d.dta

US states shape files used to compose Figure 2.

(l) Figures_5_6_data.dta

Collection of the pre-reform means, point estimates, standard errors and bootstrapped confidence intervals of Table 5 to compose Figures 5 and 6.

(2) Do Files

Each do file is named after the Table or Figure in the paper that the results relate to. Running a do file will replicating the results for that table or figure.
