

The files contained in this folder can be used to replicate the results of “The Political Economy of Municipal Pension Funding,” by Brinkman, Coen-Pirani, and Sieg. The folder contains three files, which are described below.

city_analysis_0817.do: This is a Stata file that contains the code used to produce the analysis in the paper. It reads in two data files, city_data_stata8.csv and data1990.dta, and then processes the data and produces the results found in the paper. Comments in the code describe the different variables. The code is organized and labeled according to the figures and tables found in the paper.

city_data_stata8.dta: This file contains data drawn from several sources. Importantly, it contains the data on pension liabilities as well as census data on age and ownership distributions. Other control variables are also found here including income, house values, and population.

data1990.dta: This file contains data from the 1990 census on ownership and age distributions for different cities.
