Instructions for replicating tables and figures:

1. Download the data zip file and unzip in some directory on your computer.  
  
You will see a number of Stata do files in this directory and a subdirectory that contains the data (in Stata 10.0 format).
2. Open analysis\_all.do in a text editor and fill in the directory path.
3. analysis\_all.do calls the do files that produce Tables 1-6, Figures 1-4, and Appendix Table 1. You will see two new subdirectories after running this do-file: "output" (which will contain \*.xml files of Tables 1-6 and \*.emf files of the figures) and "logs" (which will contain text files with the inputs into the household displacement rates in Tables 4 and 5 and the output for Appendix Table 1).

Note: A description of how the data set provided was constructed from the raw data is given in Online Appendix A.
