

readme

The data for this "Hometown Ties and the Quality of Government Monitoring: Evidence from Rotation of Chinese Auditors" may be accessed at:

Project

https:

There are three replication files included here, two stata datasets and one do file.

1. AEJ_do.do is a Stata do file which executes all tables when placed in the same directory as the two datasets. The user must replace his/her username in the location where the file reads:

```
if "`c(username)'" == "user"
```

and input the directory where the data are located where the file reads:

```
cd "directory"  
use "directory\AEJ_main.dta", clear
```

Finally, note that the user must create a subdirectory titled "tables" where all results will be deposited.

2. The main data file is AEJ_main.dta which includes all data for our main results. All variables are labeled in the do file.

3. The data file AEJ_firm.dta has the basic firm-level data for Table 1b, Table 8 and Tables A2/A3/A4.
