

Replication Read Me for: Revisiting the Effects of Unemployment Insurance Extensions on Unemployment: A Measurement-Error-Corrected Regression Discontinuity Approach

Steven Dieterle, Otávio Bartalotti, and Quentin Brummet*

This document provides guidance for replicating the results in *Revisiting the Effects of Unemployment Insurance Extensions on Unemployment: A Measurement-Error-Corrected Regression Discontinuity Approach*. There are two sets of files included in the replication material: (1) a set of final Stata data sets and do files for directly generating the results presented and (2) a set of intermediate do files that were used to generate the final data sets.

1 Final Replication Files

Starting with (1), the final data sets include the following files:

1. BBD-RD.dta: used for all RD estimates reported in the paper
2. BBD-bpfe.dta: used for the BPFE estimates
3. BBD-lodes.dta: used for the main spillover results reported in the paper
4. ui-weekly-hilo.dta: used to generate some descriptive information for the spillover results

These four data sets are used to generate the following set of results by the included do files:

1. BBD-RD-examples.do: generate examples found in Figure 1

*Bartalotti: Department of Economics, Iowa State University. 260 Heady Hall, Ames, IA 50011. Email: bartalot@iastate.edu. Brummet: NORC at the University of Chicago. 55 E Monroe St, 31st Floor, Chicago, IL 60603. Email: brummet-quentin@norc.org. Dieterle: School of Economics, University of Edinburgh, 31 Buccleuch Place, Edinburgh, United Kingdom EH8 9JT. Email: steven.dieterle@ed.ac.uk.

2. BBD-RD-Log-Unemployment.do: generate estimates in Table 1
3. BBD-RD-EmpPop-QWI.do: generate estimates for Table 2 row (1)
4. BBD-RD-Earn-QWI.do: generate estimates for Table 2 row (2)
5. BBD-RD-Wkwage-QCEW.do: generate estimates for Table 2 row (3)
6. BBD-bpfe.do: generate estimates for Table 3 column (1)
7. BBD-RD-Log-Unemployment-QD.do: generate estimates for Table 3 columns (2), (3), and (4)
8. BBD-weekly-ui-diff-hilo.do: generate Figure 2 and Appendix Table E.1
9. BBD-LODES-Event-History.do: generate Table 4, Figure 3, and Figure 4
10. BBD-LODES-FE-Reg.do: generate estimates for Table 5
11. BBD-RD-Placebo-Random: generate estimates for Appendix Table C.1 row (1)
12. BBD-RD-Placebo-UIDiff: generate estimates for Appendix Table C.1 row (2)
13. BBD-RD-Placebo-p4: generate estimates for Appendix Table C.1 row (3)
14. BBD-RD-Placebo-p5: generate estimates for Appendix Table C.1 row (4)

For our analysis of restricted-used ACS microdata in Appendix Table A.1, we used person-level ACS 1-year survey data from years 2005-2011 housed at the US Census Bureau. Using person-level survey weights, we aggregated the data to create tract*year measures of unemployment and labor force counts described in Appendix A.

ACS microdata is available for researcher access in the Federal Statistical Research Data Center (FSRDC) network. For further information regarding FSRDC data and access procedures, refer to <https://www.census.gov/fsrdc>. We have provided the code for replicating Appendix Table A.1 for researchers with access to the ACS microdata in BBD-RD-aggr-aror.do.

2 Intermediate Files

Here we outline the files used to create the four included final data sets. Importantly, it works best to create the four final data sets in the order below, as some intermediate data files used to create one final set are also used in creating the subsequent final data sets. The following files were used to create BBD-RD.dta:

1. BLS-LAUS-unemployment-data.do

2. UI-Benefits-Quarterly-Average-All-Data.do
3. LAUS-JOLTS-UIB-Merge.do
4. border_counties.do
5. Census-GIS-data.do
6. Census-Pop-Data.do
7. QCEW-data.do
8. qwi_2017.do
9. county-work-pop.do
10. placebo-trigger-treat.do
11. BBD-RD-data.do

The following file creates the BBD-bpfe.dta from the previously created RD files:

1. BBD-BPFE-data.do.

The ui-weekly-hilo.dta is created by running the following files

1. hilosamp.do

Note this requires the included statecodes.dta data set which simply includes a crosswalk between different state identification numbers.

Finally, BBD-lodes.dta is created by running the following files:

1. LODES-data.do
2. LODES-CensusBlock-data.do
3. UIB-data-for-LODES.do
4. Work-Across-Border-Census-Block.do
5. BBD-lodes-data.do
