

The estimations in this paper are made using three different databases. These data are supplied in STATA 6 (*.dta) format.

- 1) CPS data for the College/HS Log Wage Premium, and Relative Supplies measures (1979-2002) combined with educational data (1973-1993) from the NCES, Tuition from the WHEB, and State Appropriations Data from the Grapevine site, as described in the data appendix. These data are 3-year averages and in 1995\$US dollars. The lagged educational data is matched with the CPS 3 time period later (9 years). These data are in the file `cpsed.dta`
- 2) Educational Data from NCES, Tuition from the WHEB and State Appropriations Data from the Grapevine site as described in the data appendix. These data are yearly from 1973 to 2000 and are in 2000\$US. These data are in the file `edyrly.dta`
- 3) Censuses (1980-1990-2000) data for the College/HS Log Wage Premium, and Relative Supplies measures combined with educational data (1970-1980-1990) from the NCES, Tuition from the WHEB, and State Appropriations Data from the Grapevine site, as described in the data appendix. These data are in 1995\$US dollars. The lagged educational data is matched with the Census ten years later. These data are in the file `censused.dta`

The programs used to produce the numbers displayed in the Tables are also in STATA 6 and the programs names `Table*.do` refer to the table numbers.
