

Readme file for “Disability Insurance and Healthcare Reform: Evidence from Massachusetts”

MMS_MA_analysis.do includes code to produce all tables in the paper. The program uses two data sets: *MA_state_data.dta* and *MA_county_data.dta*, which are described below.

MA_state_data.dta

Observations are state-quarter

Includes all states in NE Census division, 2002q1-2009q3

Variables are:

- State: state abbreviation
- q_fld: quarter of filing
- wapop: working age population (from Census)
- allapps: total SSDI + SSI applications per 1,000 working age residents
- DIonly: applications for SSDI only excluding concurrent
- SSItotal: applications for SSI including concurrent
- SSDItotal: applications for SSDI including concurrent
- ue: unemployment rate (from BLS)
- unin: health uninsurance rate (from Census Health Insurance historical tables)

MA_county_data.dta

Observations are county-quarter

Includes all states in NE Census division except RI, 2002q1-2008q3

Variables are:

- county: county identifier (FIPS code)
- state: state abbreviation
- q_fld: quarter of filing
- wapop: working age population (from Census)
- allapps: total SSDI + SSI applications per 1,000 working age residents
- DIonly: applications for SSDI only excluding concurrent
- SSItotal: applications for SSI including concurrent
- SSDItotal: applications for SSDI including concurrent
- SSIonly and concurrent broken out separately to check for suppressed cells
- Allapps_mntime, DI_mntime, SSItotal_mntime: mean time filing to onset (initially allowed applicants only)
- ue: unemployment rate (from BLS)
- nohi05: health uninsurance rate from 2005 (from Census Small Area Health Insurance Estimates program)
