

Import competition and the gender employment gap in China

Feicheng Wang, Krisztina Kis-Katos, Minghai Zhou

Forthcoming at the Journal of Human Resources

README file

Overview

Data and programs in this replication package are used to reproduce tables and figures in this paper using Stata 17.0 SE-Standard Edition. The replication folder consists of four sub-folders and a ReadMe file:

- Folder “dofiles” stores Stata do-files;
- Folder “data” stores raw data files;
- Folder “figures” is used to save exported figures;
- Folder “tables” is used to save exported tables.

Data

Details on the data sources and measures of variables can be found in Online Appendix C of the paper. This folder contains aggregated data necessary to replicate the final results. Details of each dataset are as follows:

- **employment_rate_ILO.csv:** Employment rates by gender estimated by ILO for China for the years 1990 to 2015. Data are used to produce Figure A.1.
- **employment_rate_pop_census.xlsx:** Employment rates calculated from the population census waves of 1990, 2000, and 2010. Data are used to produce Figure A.1.
- **fesh90.dta:** Share of female workers by 3-digit Chinese industry in 1990. Data are used to produce Figure A.3.
- **regdata.dta:** Changes in tariffs and labor market outcomes at the prefecture level. Data are used to produce estimation results.
- **tariff_avg.dta:** Average import and export tariffs between 1990 and 2015. Data are used to produce Figure A.3.
- **tariff_cic90.dta:** Import tariffs measured at the 1990 3-digit industry level from 1992 to 2015. Data are used to produce Figure 1.
- **wapop.dta:** Working-age population by employment status in 1990 and 2005 aggregated from the population censuses of 1990 and 2005. Data are used to produce Table 1.
